PROFESSIONAL EXPERIENCE

AXA Mansard

Feb 2022 - Present

Data Scientist

- Engineered a healthcare service matching pipeline that mapped approximately 8 million legacy tariff records to about 300,000 standardized services using cosine similarity, fuzzy matching, and batched processing, significantly reducing manual mapping by medical teams during migration to a new claims platform.
- Built and deployed a FastAPI based car valuation service using machine learning models, enabling real time vehicle pricing and reducing reliance on external pricing vendors.
- Automated ETL pipelines with Python and SQL to extract, transform, and load production data into analytics systems, supporting 20 plus operational dashboards and eliminating manual data transfer workflows.
- Developed and deployed a personalized product recommendation system using Python and SQL to support targeted cross sell strategies across customer segments.

ExamRocket

Jan 2025 - Nov 2025

Machine Learning Engineer, Contract

- Redesigned AI model provider integrations using asynchronous execution, batching, request deduplication, retries, timeouts, and fallback handling, increasing throughput and reducing latency by 30% across speech to text and scoring pipelines.
- Owned production deployment and operational reliability of AI components, implementing monitoring, error handling, and resilient execution flows to support stable real time evaluation.

Fiverr

Oct 2020 - Feb 2022

Machine Learning Engineer, Freelance

- Designed and delivered 40 plus machine learning solutions spanning forecasting, classification, recommendation, NLP, computer vision, and time series modeling across multiple client domains.
- Built reusable data pipelines, preprocessing workflows, and model evaluation frameworks using Python and SQL to support both model training and production inference across client projects.
- Deployed machine learning services using Flask, FastAPI, Docker, and GCP, converting trained models into production applications used within client workflows.

ACHIEVEMENTS & LEADERSHIP

- Co authored a peer reviewed study on CNN hyperparameter optimization for pneumonia detection, published in *Periodica Polytechnica Electrical Engineering and Computer Science*, 2026.
- Placed 2nd in the Data Science Nigeria Espresso Churn Prediction Challenge on Zindi among 358 active participants, using CatBoost and XGBoost model blending.
- Co led the AXA Data Science Community, teaching practical data science concepts and applications to more than 40 employees.

EDUCATION

University of Lagos

Lagos, Nigeria

B.Sc. Computer Science

2025

TECHNICAL SKILLS

- Languages:** Python, SQL
- Machine Learning:** PyTorch, TensorFlow, Scikit-learn, Transformers, NLP, Computer Vision
- Data Engineering:** ETL Pipelines, Spark, BigQuery, Databricks
- APIs & Backend:** FastAPI, Flask, REST APIs
- Cloud & Infrastructure:** GCP, Docker, Kubernetes, CI/CD
- ML Operations:** MLflow, Monitoring, Logging
- Developer Tools:** Git, Linux, Jupyter, Postman
